

Description of a Courtney Bed:

The Courtney Bed is an FDA listed and registered Class I manual hospital bed (#E544743). Fabricated from solid hardwood, strong fabric high-sided enclosure panels, open top with optional panel for full enclosure, this bed provides a solution for protection. Designed to provide an alternative sleeping environment for individuals that have a diagnosis-related cognitive or communication impairment and/or a severe behavioral disorder that results in a safety risk if placed in a standard hospital bed.

Specifications & Features the Courtney Bed provides:

- Our product is indicated for individuals who are at high risk for falls, unsteady gait, are confused, impulsive, restless, agitated or who demonstrate self-injurious behaviors; are unable to ask for assistance or respond to redirection; or who climb out of bed when it's unsafe to do so.
- Our product is indicated as a less restrictive restraint than other types of restraints. It can be used as an alternative when a vest or wrist restraint are not appropriate or applicable.
- Our product is indicated to be used in early childhood, adolescence and late adulthood.
- Our product has high-sided fabric enclosure panels that are securely clamped by the bed frame. (Patent #7,434,280) This design eliminates the access to loosen, unroll, unzip or remove the enclosure while inside the bed.
- Our enclosure consists of four independent panels with an open top. We do offer a top panel for full enclosure that can be added at anytime, with initial installation or after years of use.
- With independent panels, this feature offers the ability to replace one panel at a time. This feature provides cost saving if a replacement is needed.
- Our product has a patented (#10,959,495) safety zipper feature with enclosure. This feature eliminates access to the zipper heads while inside our bed, creating a secure enclosure.
- Our product offers two material options for the enclosure panels, a heavy-duty mesh with fluid-resistant canvas or a heavy-duty full mesh, waterproof option.
- Our standard product provides a mattress height of 24 inches from the floor. This feature provides an easy transfer height. It also provides the ability to utilize many personal lifting devices. We also offer a low bed height feature, mattress height of 13 inches from the floor. This option provides accessibility for individuals with limited mobility.
- Our product is available in two sizes:
 - 36x80 - sleeping area is 36 inches wide by 80 inches long by 50 inches in height - recommend weight limit is 300 pounds
 - 60x80 - sleeping area is 60 inches wide by 80 inches long by 50 inches in height - recommend weight limit is 1000 pounds
- With our independent panels and bed frames, this features allows for convertibility to change the width, height or features of our bed at anytime. We offer a conversion kit that provides the ability to convert a 36x80 size into a 60x80.
- We offer a line of exterior padding. This feature eliminates the exposure of the wooden bed frame on the outside of the bed. Based on medical necessity, this feature is indicated for patients who are at high risk for falls, unsteady gait or self-injurious behaviors.
- We offer tubing ports in the end panels . These ports allow for tubing access into the sleeping area without compromising the security and safety the enclosure provides.
- We offer retractable casters. This option provides the ability to easily move the bed when casters are engaged. When casters are not engaged, the wheels are lifted from the floor and bed sits firmly on the floor, eliminating the risk of movement from a caster lock failure.
- Our product comes with a three-year unlimited warranty. Other options may have a limited warranty and/or offer extended warranty's for additional fees.
